Executive Secretary

UNCLASSIFIED

United States Department of State

Washington, D.C. 20520

November 6, 1986

Dear Senator Iqbal:

I am replying to your letter to the President, enclosing photographs which were taken of you with the President at the time of the White House state dinner, given for Pakistan Prime Minister Mohammad Khan Junejo last July.

I would like to transmit to you on behalf of President Reagan thanks and appreciation for your expressions of support. The Prime Minister's first official visit to the United States was indeed an historic occasion, marking Pakistan's peaceful return to constitutional, representative government under the leadership of the Prime Minister and President Zia. In addition, we had an opportunity to underscore the importance of our bilateral relationship, and to express our continued backing for Pakistan's resolute stand on Afghanistan and for its unparalleled generosity and humanitarian concern in caring for over two million Afghan refugees.

I am returning the photographs you sent with your letter, one of which President Reagan has signed as a memento to you, and in commemoration of the Prime Minister's visit.

Sincerely yours,

Mark Linton
Acting Director,
Bureau of Pakistan, Afghanistan,
and Bangladesh Affairs

Dear Mr. President,

NSC

This is to recall our happy meeting in the White House, as the member of Prime Minister's entourage on the night of State banquet hosted by you and Mrs. Nancy Reagan in honour of Pakistan Prime Minister. It was an historical occasion for me to meet most dashing and dynamic President of the United States. I think even your staunch opponents would admit that the United States under your able leadership has touched the new heights of glory and assumed the role of super power in true sense leaving far behind the other Super Power in world politics and promotion of world peace.

I had opportunity of visiting United States on three-four occasions previously. My last visit was during your election campaign to attend the Republican Convention at Dallas. I had met you at that time as well but my recent meeting with you in White House was very memorable one.

Pakistanis have developed a sort of sentimental attachment with you. They like your daring and clear-cut policies and the confidence and the support which your own nation reposes in your programmes and policies is major factor of your popularity abroad.

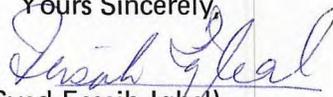

We Pakistanis are particularly grateful to you and the United States for effective support to Pakistan principled stand on Afghan issue. But for your active support it would have been difficult to contain the Soviet aggression in Afghanistan. We hope that your continued interest in the regional and world peace would help solve the Afghan problem amicably and the Afghan Refugees in Pakistan would return to their homes and hearths in Afghanistan with honour and security.

I am enclosing a photograph taken at the White House for favour of your signatures and return to me for my personal album.

With kindest regards,

President Ronald Reagan,
White House,
Washington—DC(USA).

United States Senate

WASHINGTON, DC 20510

July 10, 1986

431201

The President
The White House
Washington, D.C. 20510

Dear Mr. President:

I understand that the Prime Minister of Pakistan, Mohammed Khan Junejo, will be in Washington, D.C. on July 15 for a State Visit. I would like to ask that either an invitation to the State Lunch or Dinner be extended or that an opportunity to meet with the Prime Minister be extended to one of my constituents, Mr. Donald Stager, President and Chief Executive Officer of Dillingham Construction Corporation, Pleasanton, California.

Dillingham Construction is the only major United States civil engineering contractor present in Pakistan with offices in Islamabad and Rawalpindi. Employing an average workforce of 1,000 since 1978, Dillingham Pakistan, Ltd. has performed approximately \$150 million of work at the largest earthfill dam in the world, the massive Tarbela Dam in northwest Pakistan.

Dillingham is also active on a number of other projects throughout Pakistan, including the Scarp Mardan Subsurface Drainage job and working for Occidental Petroleum (U.S.) at the Dhurnal gas and oil field and for Pakistan Petroleum, Ltd. (Pakistan) at the Sui gas field.

Mr. Stager has over 30 years of experience in the heavy construction field. His credits include many large hydroelectric projects and Middle East air bases. Mr. Stager was integral to the construction in the early 1960's of the huge Mangla Dam in West Pakistan. He has maintained an active interest in and involvement with Pakistan ever since that time.

I believe that Mr. Stager would be a fine addition to any official State function. I have enclosed for your information background information on Dillingham and a copy of Mr. Stager's resume. Please accept my sincere appreciation for your consideration of this matter.

Sincerely,

PETE WILSON

DILLINGHAM

The Golden Gate Bridge. Along with the Eiffel Tower and the Pyramids, it's one of the most famous man-made creations in the world. **B**ut of course the Golden Gate isn't just for sightseers. On a typical morning rush, an estimated 45,000 commuters depend on it to take them to their jobs in the city. Its span across the bay is a vital link between San Francisco and all cities to the north. **F**or local authorities, the bridge's first major renovation since 1937 offered a two-fold challenge: Find a contractor experienced and reliable enough to handle the unique and difficult logistics of the job, yet at the best possible price to save taxpayer dollars. They picked Dillingham, whose men and women worked through long, cold nights to complete the job without restricting traffic flow. **T**he Golden Gate project is reflective of the capabilities we offer clients — and our reputation for completing projects on time and within budget. The following pages present in text and pictures our 100 years of successful operations throughout the world.

▲ Dillingham crews successfully completed roadbed renovations without restricting commuter traffic flow across the famed Golden Gate Bridge.

More than 100 years ago, a young sailor by the name of Benjamin Franklin Dillingham decided to lay a railroad across the swamps of Oahu. He believed it would ease shipping of produce, making Hawaii less dependent on whaling. **T**he cynics of the day dubbed it "Dillingham's Folly." They claimed it couldn't be done. **B**ut young Ben did it. He succeeded because he believed a "can do" attitude and hard work can move mountains. **T**he company that Ben built has been moving mountains ever since. Through wars and social upheavals, in recessions and boom times, Dillingham has quietly been at work building dams, hospitals and a thousand other structures that enhance a better quality of life. **O**ver the last 100 years, five generations of Dillingham professionals have completed every contractual obligation they've ever entered into — more than \$25 billion worth of projects worldwide! **T**oday Dillingham ranks as one of the preeminent construction and engineering firms in the world — moving onward and stronger in its commitment to technical excellence. Ben would have been proud.

Down through the years, Dillingham employees have played a key role in helping develop Hawaii's tourism and other major industries. Since the 1960s, we've built over nine million square feet of hotel floor space, improved harbors, modernized U.S. Naval installations, and built important manufacturing facilities, utilities and transportation systems throughout the Islands.

Like Britannia of Old ...

... the sun rarely sets on the Dillingham organization. Last year, our project teams worked on location in virtually every time zone in the world — completing more than \$900 million worth of construction. In fast-growing California, our professionals built hospitals, wharf facilities, high-rise office buildings, a rapid transit line, and an outfall for miles across the floor of the Pacific. In the Midwest, we're participating in a multi-million dollar labyrinth of locks and dams on the Mississippi River. In Arizona, it's a water purification plant; in Florida, a rapid transit station and food-processing plant; in Wisconsin, huge underground conduits; and in the Sierra Nevada, a hydroelectric powerhouse gouged out of solid granite. For our operations in the north, our Canadian Division last year built petrochemical plants in Alberta, as well as a major bridge, pier foundations, and a mining development in British Columbia. In Hawaii, where Dillingham first established its reputation, we built resort hotels, a freeway interchange and waterfront projects. In the Near East, our International Division is building a power plant in Pakistan. In the Far East, we've erected 22 residential towers in Hong Kong and are participating in a hotel construction in Gansu Province of the People's Republic of China. Wherever there's a need for experience and expertise to build a better quality of life, Dillingham will be there.

◀ Piping and mechanical installations built by Dillingham at Chevron's Fuel Handling Pier enable the oil company to off-load crude for its West Coast refinery operations

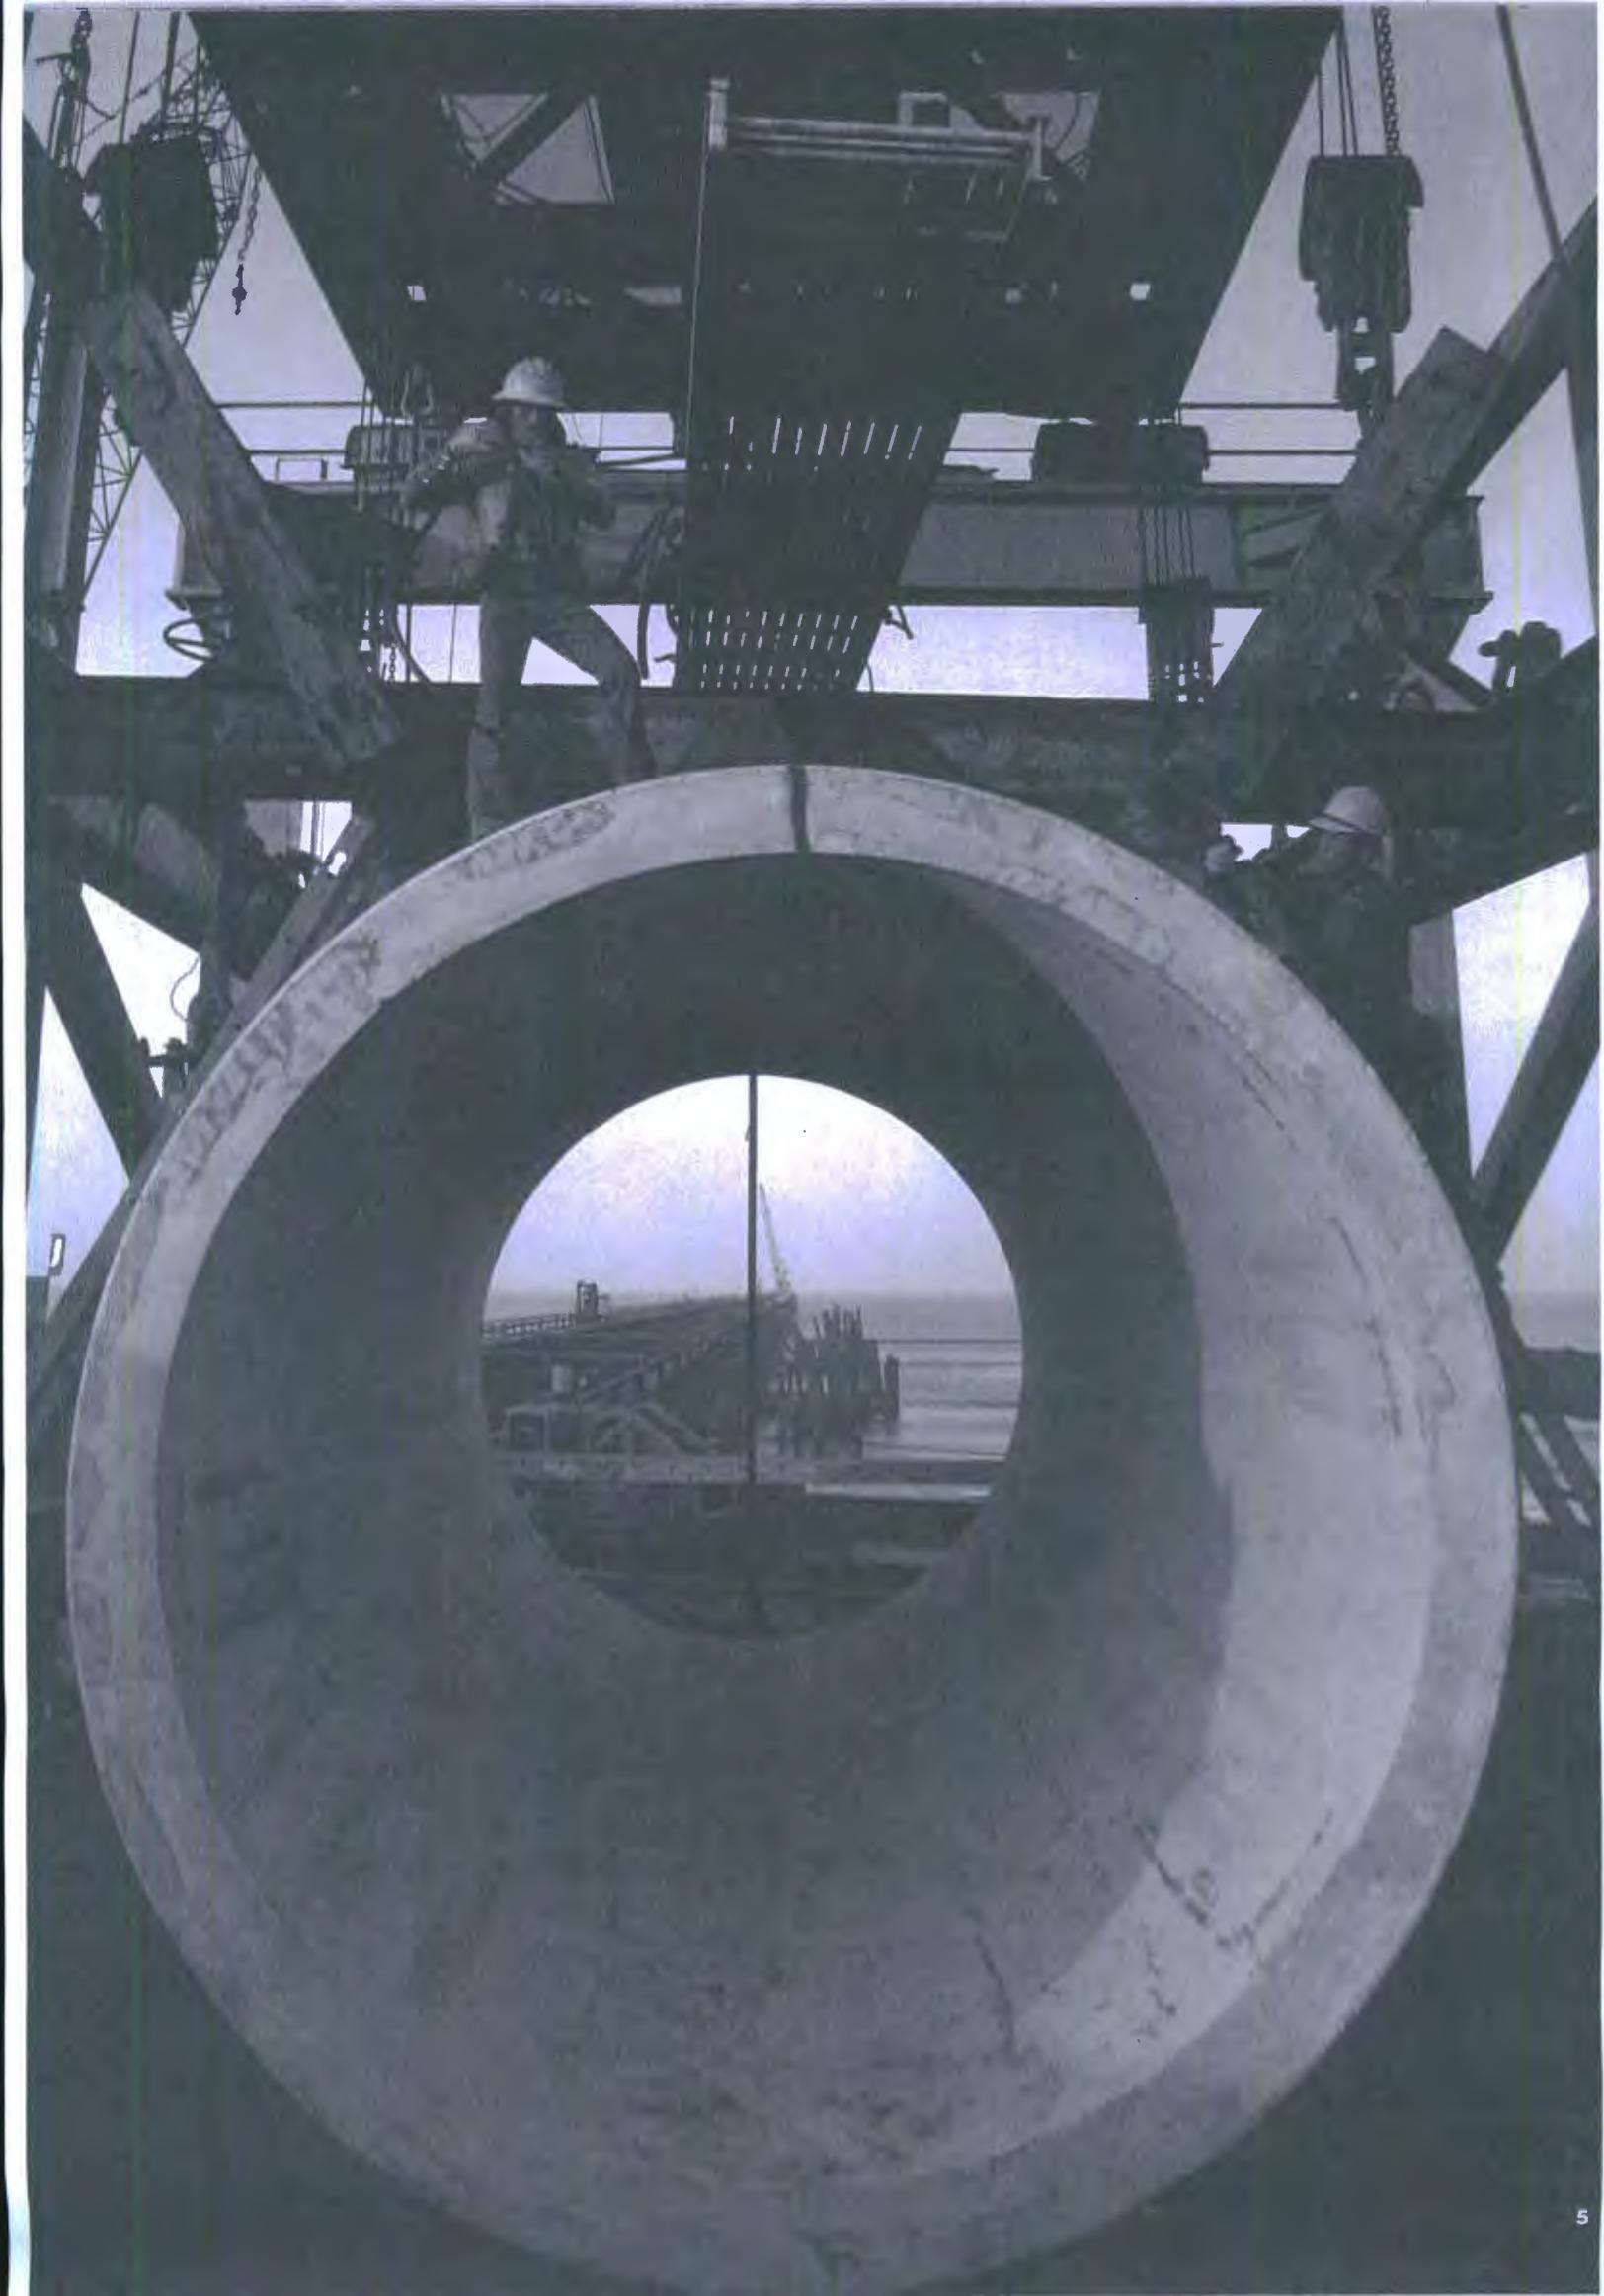

▲ Lockheed's one-million-plus-square-foot Plant No. 10 was "fast tracked" to expedite assembly of aircraft. Classified as "high hazard," the project required complex technical, safety, security and communications systems.

▶ Dillingham construction of the Honolulu Reef Runway created a new land area bigger than Waikiki by dredging up 19,000,000 cubic yards of coral, protecting it with 800,000 tons of revetment rock and 18,100 concrete doloses

▶ Dillingham Heavy Division workers ready a 91-ton pipeline section for placement on the \$150 million Southwest Ocean Storm and Sewage Outfall Project off San Francisco's Ocean Beach

Prominent on Metropolitan Skylines ..

... throughout the Pacific Rim, the South and the Rockies, office towers that Dillingham built and sponsored stand as enduring examples of our strong experience in commercial construction. **S**uch landmarks include San Francisco's 43-story Wells Fargo Bank Headquarters, the 16-story Wilshire/Fairfax in Los Angeles, the twin-towered Pacific Center in Honolulu, and the quarter million-square-foot Denver Highlands. Our ability to guarantee maximum price early in design, together with our reputation and stability, greatly aids developers/owners in gaining approval of favorable financing packages. **W**e also build elegant hotels, like the \$53-million MCA/Sheraton Premiere in Universal City, the \$22-million Hyatt on Union Square in San Francisco, and the \$35-million Seibu Maui in Hawaii. In many cases, our value engineering services have enabled owners to make more funds available for aesthetic enhancements. **W**e are a major builder of hospitals as well, proud of our role in the Kaiser hospitals San Diego's Scripps Clinic, the St. Vincent in Portland and O'Connor in San Jose, St. Mark's in Singapore and Honolulu's Queens Medical Center. In recent years, we've completed 34 major medical facilities or additions. Why? Because we know how to produce maximally flexible health care space at minimal cost. **W**e've also built stadiums such as Honolulu's 50,000-seat Aloha, the Grandstands at the Royal Hong Kong Jockey Club, Vancouver's domed B.C. Place, and the Joe Davis Stadium in Huntsville, Alabama. Corporate headquarters for Nissan, Sunkist, and Ralph M. Parsons. The list goes on and on — more than 150 major buildings in the last decade alone. **T**he experience.

▲ Ambassador Auditorium, hailed as one of the most beautiful buildings in North America, exemplifies our experience with unique institutional projects, including churches, libraries, and university and municipal structures.

► The 21-story, 448-room New Otani Hotel & Garden, considered to be one of Los Angeles' finest new high-rise hotels when it was built, was also one of the first to embody new quake-resistant structural designs.

► Beginning with the Edward Durrell Stone-designed, award-winning Phase I at Scripps Clinic & Research Foundation, Dillingham has performed 90% of all construction work — more than \$60 million — at the famous medical facility.

► Dillingham provides building materials as well as services for high-rise office buildings. For Embarcadero Center's Building No. 4 in San Francisco, Dillingham supplied all precast exterior panels.

The Maze of Pipes, Conveyors and ...

... blenders of the modern industrial facility can overwhelm many a well-intentioned contractor. But these complex projects have been a mainstay of Dillingham's business for 100 years. We excel not only in building structures, but in installing sophisticated process mechanical systems as well. **W**hether it's a retrofit, phased expansion or new plant, we've handled similar projects many times before. From petroleum and paper to microcircuits and medicine, we've helped many of America's lifeline industries build facilities of immense complexity. **O**ur project managers are particularly well-versed in handling the special facilities unique to industry — the "clean" rooms, complex utility systems, automated environmental controls, and capital equipment. **T**heir five generations of experience pay direct dividends to owners — in faster start-ups and smoother jobs, value engineering that saves dollars in a thousand small ways, and the peace of mind that comes with hiring the best.

► Dillingham workers such as these shown at a Northern California wastewater treatment construction site have completed over \$752 million of water recycling/waste treatment systems on the West Coast, Hawaii and overseas.

▲ For the Judson Steel Mill, Dillingham accomplished complete modernization, including addition of a continuous caster, reheat furnace, rolling mill and materials handling system, with a downtime of only two months.

► Dillingham designed and built this \$100-million Pine River Gas Processing Plant in British Columbia for Westcoast Transmission Co., Ltd.

► Process mechanical work is a Dillingham forte. Project experience includes food-processing, chemical, pharmaceutical, oil refinery, and wood and pulp facilities.

"Sure, we estimate equipment, labor and material just like everyone else. But we give a lot of thought as to how we're going to do the job. This is a do-it-better business. When we're low bidder, it's probably because we found that 'better way.'"

Bill Nugteren
Manager
Industrial Estimating

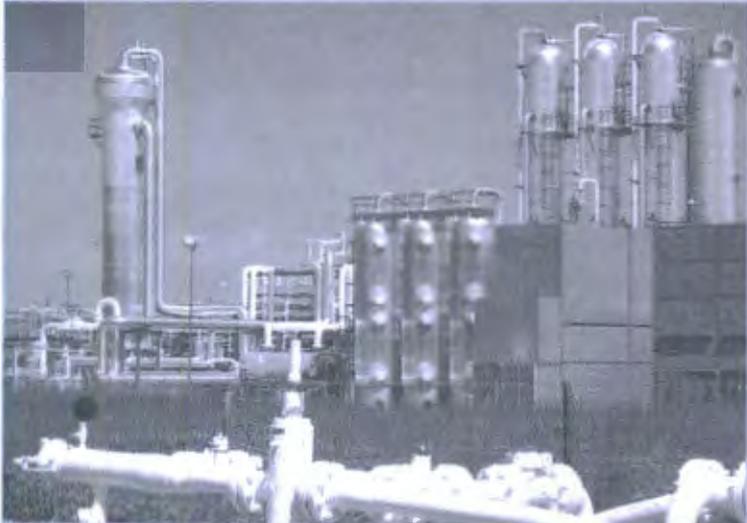

"When you're running 60 projects, you're generating a lot of work items. Our computers help us keep the owners informed. How does moving completion up three weeks impact cost? We can tell them."

Jeff Bossa
Director
Construction Engineering

Nowhere Is Experience ...

... and careful planning more critical than in industrial maintenance. Not only is the expansion or retrofit work extensive, the production process itself is at risk. Even slight delays in getting the plant back on-line can cost millions of lost revenues. **W**ith so much at stake, Dillingham takes this type of business extremely seriously — dedicating to many of our most senior project managers. **F**or more than three decades, Dillingham has been providing exceptionally skilled craftsmen in all 13 building trades at levels precisely tailored to client needs. That may mean 300 men working routinely, day-in and day-out. Or the rapid marshalling of a 1,500-man workforce laboring 'round-the-clock until an annual maintenance program is completed. **O**ur great strength is that we can fulfill operators' peak demands for skilled labor. By not having to carry highly paid but under-utilized workers on their payrolls, operators can realize substantial savings. **W**ith many requirements of maintenance projects, the job scopes are immensely complex, yet the work must be performed quickly. That's why our project managers work closely with operators to identify and prevent potential problems before work begins. They may even recommend "dry run" rehearsals with models to insure smooth conversion of large capital equipment.

▲ Dillingham provides the widest scope of maintenance services for operations ranging from food-processing plants to refineries to the most sophisticated research laboratories.

► Dillingham's own experience in building, owning and operating this LPG facility has given us valuable insight into the industry's ongoing maintenance requirements.

◀ For this large refinery in Northern California, Dillingham provided a massive infusion of highly skilled manpower to expedite major modifications and reduce downtime.

◀ Dillingham also provides contract maintenance services to routinely refurbish capital equipment — a necessity in the highly caustic petro-chemical environment.

Dillingham's Overseas Experience ..

... was initially forged in the heat and dust of a hundred treacherous Pacific atolls in the late 1930's, as America began building its western defenses. **A**fter Pearl Harbor, building air and sea bases in the Pacific became a matter of national survival. Again, Dillingham responded. In spite of severe manpower and material shortages, accelerated schedules, and war zone dangers, our people helped build 28 airstrips in a steady march across the Pacific. **S**ince then, we've extended our international construction capability to reach around the world. We've handled large, complex projects in deserts and rain forests, in high mountains and tropical jungles, through monsoons and droughts, in wartime and peace. We've built huge airbases and power plants in the Middle East, dams in the Caribbean, roads, harbors and utilities in the Pacific, hospitals and residential towers in the Far East — in all, more than 200 projects outside the continental United States. **B**ut we always endeavor to leave more than just a structure behind when we're finished. Whenever possible, Dillingham employs and trains nationals in the engineering, technical and building trades required by the project. The result is a groundswell of local pride, construction capabilities that remain in the host country, and mutual goodwill.

► Operating in joint venture, Dillingham has helped build over 130 kilometers of concrete lined canals and several small dams and other structures for an irrigation system in eastern Sri Lanka.

► For Richland Gardens, a joint venture project in Hong Kong, Dillingham simultaneously raised 22 apartment towers, each 34 stories high, to house over 25,000 people in three million square feet of space.

▼ Employing an average workforce of 1,000 men since 1978, Dillingham has performed all work required to extend the switchyard and expand the generating capacity by 1,050 MW at the largest earthfill dam in the world, the massive Tarbela Dam in northwest Pakistan.

◀ Dillingham's airbase experience began with our participation in building WWII airbases across the Pacific. More recently, we have helped build the huge U-Tapao Jet Airbase in Thailand and a \$500 million airbase in the Mideast, and modernized and expanded a major airbase in Oman

麗晶街市商場

Years Before the Wright Brothers ...

... flew the first airplane, Dillingham was solving transport problems. What began with B.F. Dillingham's Oahu Railway & Land Company in 1889 has grown into one of the premier transportation construction firms in the world today.

Our rapid transit credentials are demonstrated by these impressive metro projects: BART in San Francisco, MARTA in Atlanta, WMATA in Washington, D.C., CTA in Chicago, SCRTD in Los Angeles, and METRORAIL in Duval County, Florida. **We've** blasted subway tunnels through granite, suspended elevated lines high above city streets and gouged out major underground subway stations. To date, we've helped build 130 miles of track and 16 passenger stations for 27 transit projects totaling over \$935 million — more transit work than any other contractor in the United States! **T**hat breadth of experience, together with Dillingham's longstanding reputation, was instrumental in Dillingham's selection to manage construction — in joint venture with two engineering firms — of the new \$3 billion Southern California Rapid Transit District system. **You** can't come recommended any higher than that.

► One of many contracts awarded to Dillingham by WMATA required the excavation of three massive rock cavern subway stations and the removal of over 200,000 cubic yards of rock.

▲ As one of the first contractors for the Washington Metro Area Transit Authority (WMATA) 101-mile mass transit system, Dillingham built several stations, tunnels and lines. In all, over \$275 million in WMATA contracts have been successfully completed by our Heavy Division.

▼ This Metropolitan Atlanta Rapid Transit Project is just one of more than 27 major rapid transit contracts Dillingham has completed. In all, over 130 miles, representing contracts exceeding \$935 million, have been completed by Dillingham — more than any other U.S. contractor.

► As a major constructor of the Bay Area Rapid Transit system, Dillingham handled a large part of the track-laying for more than a third of the entire 75-mile system, including the customized 1,521-foot rails for the Hayward Test Track, and the construction of the Oakland KE track. Major stations and tunnels completed included Oakland Wye, Balboa Park, and Powell Street.

"Here's the way I look at it. I believe the owner, his architect and engineers, Dillingham and I are on a team. We're all working to see that this job is one we'll all look back on and say, 'We built it and we're damn proud of it.' "

Roger Bailey
Project Manager

Diverting Rivers ...

... leveling mountaintops and carving out underground tunnels — these are the truly mammoth projects that alter topography of the land to benefit millions. These are the kinds of challenges that our Heavy Construction Division takes on routinely. **W**ith its broad experience, Dillingham is well-equipped to handle the tremendous logistical problems of multi-million dollar heavy projects. **I**f the project is remote, our managers know how to develop forward staging areas for the timely availability of manpower and materials. If it involves the removal of thousands of tons of earth, or blasting through granite mountains, we're adept at handling the specialized machinery and large fleets of earthmoving equipment. **I**f the project requires special geologic, geophysical or related disciplines, Dillingham has a long and successful track record of working with these professions, as well as with joint venture partners. If the job requires personnel working in shifts around-the-clock, or other stringent requirements, the ones we are excellent that we've met those challenges before. **I**n short, we understand the special imperatives of heavy construction. As the 10th largest heavy contractor in the United States, we're ready and able to tackle them.

▲ Dillingham built PG&E's 140 MW Kerckhoff Hydroelectric Power Project, including one of the largest silo-type underground powerhouses in the world and a machine-bored 24 foot-diameter by 22,000-foot-long tunnel, all in granite — monumental tasks that would test the mettle of any contractor. Dillingham finished six months ahead of schedule.

► Dillingham served as prime contractor for the 18-million-cubic-yard earthfill dam portion of the C\$100-million Revelstoke Dam project on the Columbia River, the biggest power generator in British Columbia. Hydroelectric power plants, dams and tunnels are Heavy Division specialties.

▼ Lock & Dam 26 on the Mississippi exemplifies Dillingham's ability to participate in the biggest projects in the world on a joint venture basis. When finished, 500,000 cubic yards of concrete and 722,000 tons of riprap stone will be placed, and 4.3 million cubic yards of excavation for this 10-year, \$750-million project.

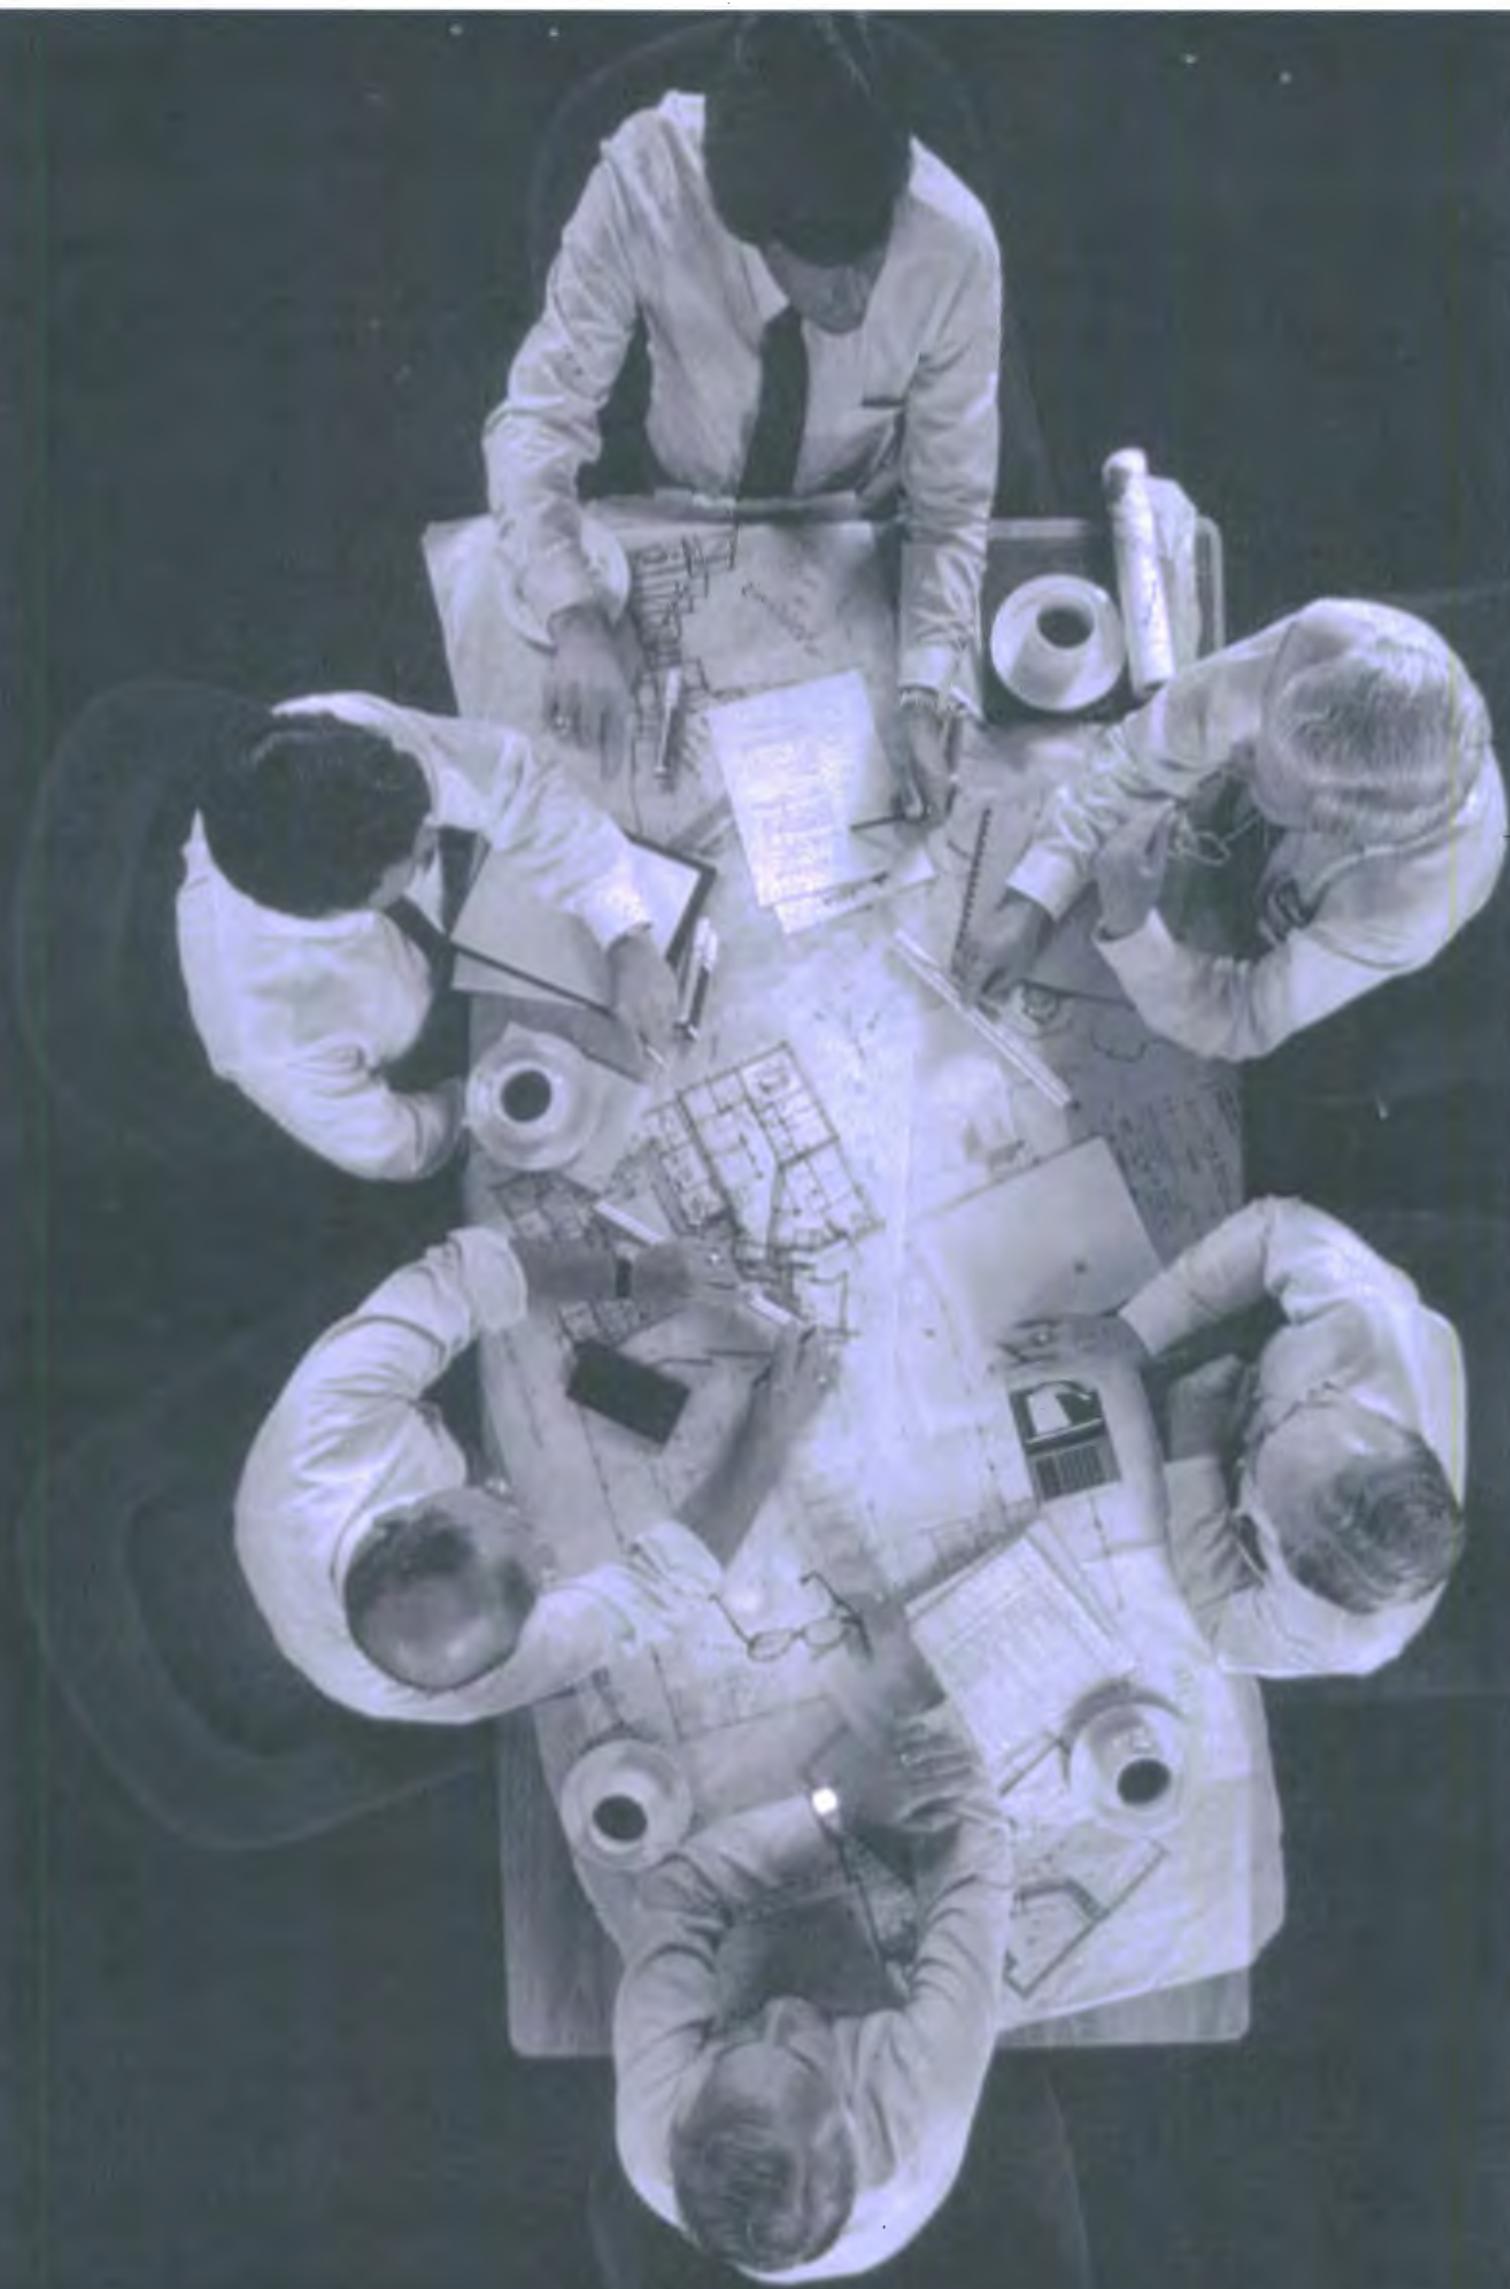

► Expert management and project skills, as well as specialized equipment, enable Dillingham to handle heavy projects ranging from major dams to transportation projects, underground power plants, and irrigation systems.

"Joe, you promised me nine trucks at 7 o'clock this morning. It's now 7:30 and I've seen only six. I know that. But we've got to pump 1,000 yards of concrete today. I don't care how you do it, but get it here! We've gotta make the schedule."

Walt Van Orden
Project Superintendent

Given An Owner's Design Basis ...

Dillingham can manage a turnkey project to provide a completed, commissioned and profitably operating facility on a fast-track schedule. Dillingham's engineering, procurement, and construction task force teams have been working on turnkey projects of immense complexity for over two decades. With more than two billion dollars worth of capital project experience to draw upon, Dillingham is setting higher performance standards for the chemical, hydrocarbon production/processing, food-processing, and forest industries. **C**onstruction Management teams are available to work with owner's representatives to organize and direct the implementation of complex design and construction projects. **P**roject Management teams provide highly specialized expertise covering a wide range of project and employing responsive, computer-based control systems. **I**ndustrial Maintenance services provide skilled technicians and operators, with an integrated team of experts available at short notice to resolve the most complex problems. Comprehensive preventive maintenance procedures derived from years of experience reduce production losses, improve safety, and compress shutdown and turnaround time. **I**f it meets the owner's requirements, Dillingham can offer an all-inclusive proposal to design, construct, own and operate a production facility to meet owner's project specifications.

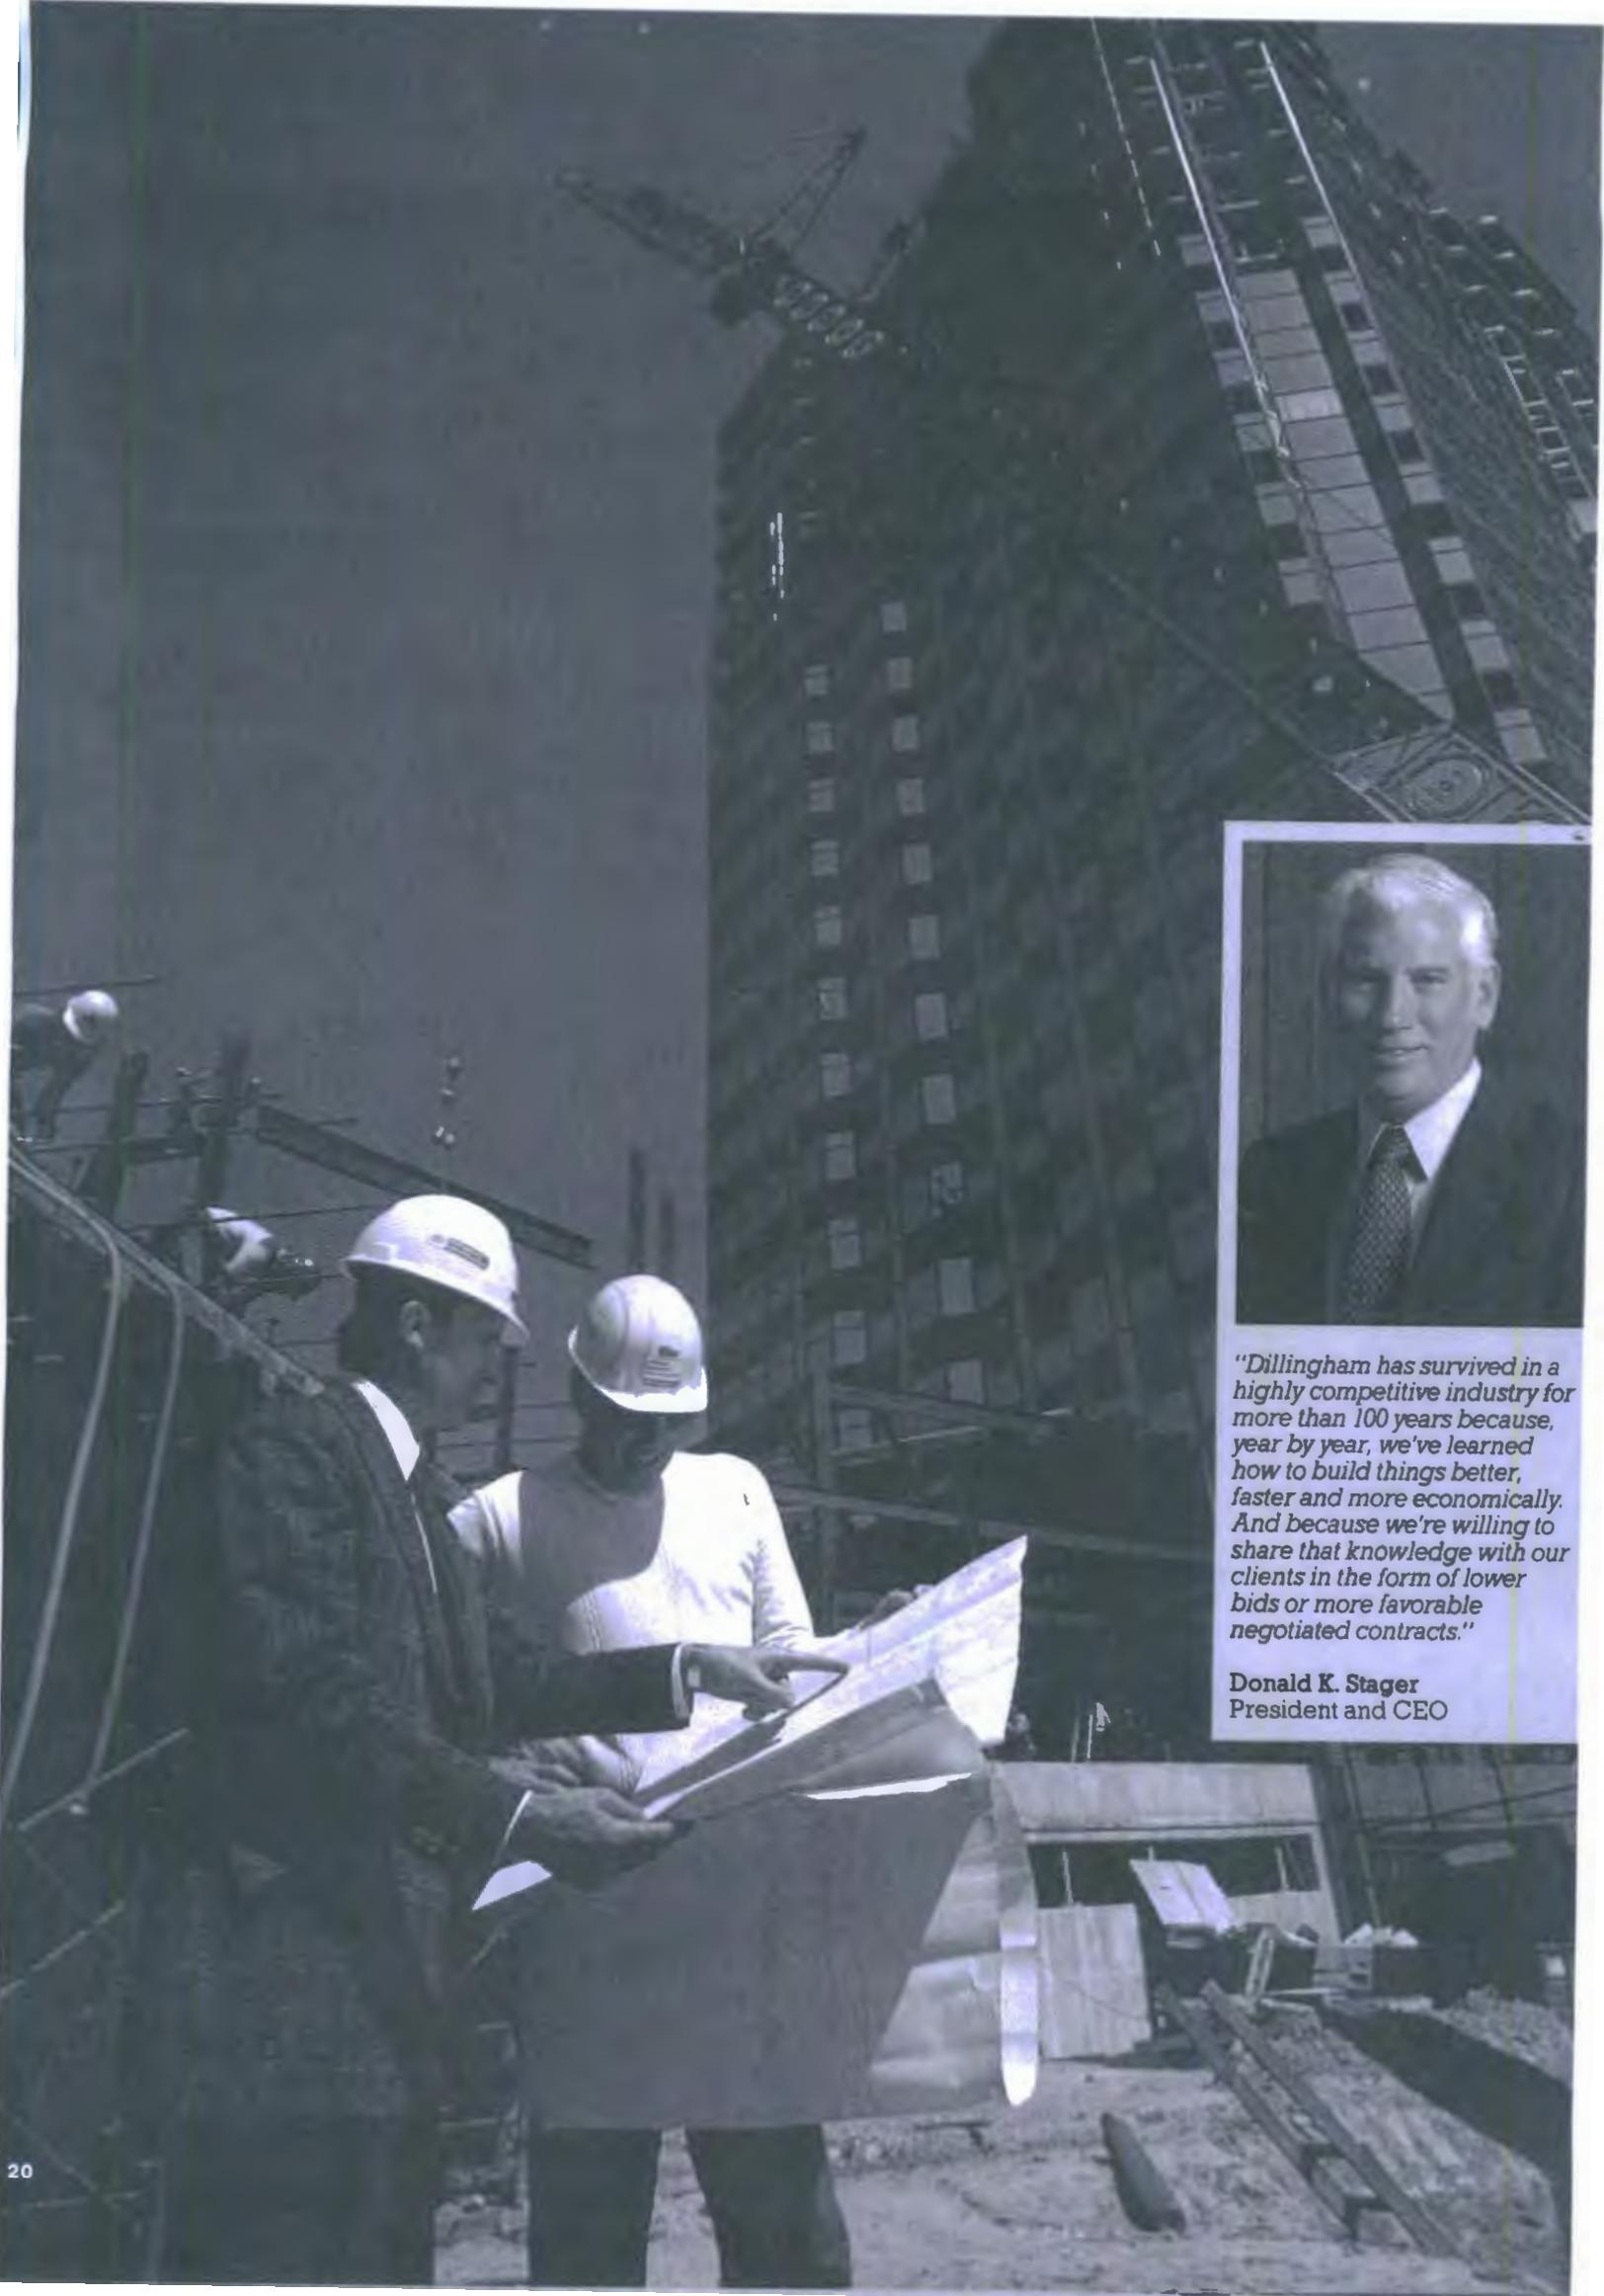

▲ This bark-drying facility is typical of our success in design/construct projects. Responsible for feasibility studies, design and construction, Dillingham finished substantially under budget and four months ahead of schedule.

► Dillingham is adept at meeting the myriad technical requirements for design/build projects, including process engineering, plant layout, and site and structural design.

◀ For Gulf Canada's Strachan, Alberta Ethane Extraction Facility, a \$30-million turnkey contract, Dillingham provided project management, engineering, procurement and construction services.

◀ Dillingham Task Force Teams can conduct feasibility studies, design the process systems, develop the site, specify the required structures and equipment, and bring the project to a successful completion.

"Dillingham has survived in a highly competitive industry for more than 100 years because, year by year, we've learned how to build things better, faster and more economically. And because we're willing to share that knowledge with our clients in the form of lower bids or more favorable negotiated contracts."

Donald K. Stager
President and CEO

Review All Plans ...

... monitor all schedules, request documentation, search out ambiguities, clarify timetables. Assume nothing. Check, then check again." That's how a Dillingham Project Manager describes his job. He knows it's his responsibility to find and prevent the complications that may arise in every job. The bottom line? No surprises for the owner. Once that working attitude is established in all our managers, then the formal project control systems can begin to work. One important control is our materials management program, which establishes companywide guidelines for procuring and expediting project materials. We further support our project managers in the field with a corporate staff of professional buyers, expeditors and traffic personnel, who assist in negotiating major purchases, ensuring timely availability, and routing materials to the jobsite in the most efficient manner. It's all part of our commitment to Quality Assurance. It's an attitude of wanting to do things right, supported by comprehensive systems that strengthen our confidence to give the best to the client. Is the Dillingham approach effective? Consider these two, not unrelated, facts. Throughout our 100 years of operations, we have completed every contractual obligation we've entered into. Over 50% of our business comes from repeat customers.

▲ Dillingham's companywide data-processing network provides instant access to budget updates, change orders, cost summaries, CPM schedules, and numerous other reports crucial to total project management.

▲ Dillingham managers meticulously monitor Critical Path Method schedules to support project progress to completion

► Maintaining control of immense projects such as the Georgia Street Viaduct in Vancouver, B.C., begins with tight cost controls. Our information systems provide daily updates of labor application, subcontract expenditures, installed quantities, daily equipment costs, and other project-related reports.

◀ Our top management echelon confers routinely with project managers and jobsite supervisors to ensure successful completion of all projects.

COMMERCIAL BUILDINGS

Office Buildings

JCG Wilshire Los Angeles, CA	\$46 million

WASHINGTON, D.C. 20008

No.Pol/Prot/17/1/85.

February 13, 1986.

The Embassy of the Islamic Republic of Pakistan presents its compliments to the United States Department of State and has the honour to enclose herewith a letter from General M. Zia-ul-Haq, President of Pakistan, to His Excellency Mr. Ronald W. Reagan, President of the United States of America, with the request that the letter may kindly be transmitted to its high destination.

The Embassy of the Islamic Republic of Pakistan avails itself of this opportunity to renew to the United States Department of State the assurances of its highest consideration.

United States Department of State,
Washington D.C.

His Excellency
Mr. Ronald W. Reagan,
President of the
United States of America,
Washington D.C.

Dear Mr President,

I would like to avail myself of this opportunity to express my profound gratitude for your kind message of felicitations on the restoration of representative government in Pakistan. The gracious sentiments expressed by you were yet another manifestation of your abiding interest in and solicitude for the welfare and well-being of the people of Pakistan.

It is a matter of immense satisfaction for us that our patient endeavours to restore democratic institutions in Pakistan have borne fruit. It is my earnest hope and prayer that democracy would be strengthened and flourish in the years ahead and that we would be equal to the task of fulfilling the solemn trust reposed in us by the nation.

...2

- 2 -

The revival of democratic institutions has added another vital dimension to our bilateral relationship which, I am confident, would be further reinforced and cemented to the mutual benefit of our two countries.

Please accept, Mr. President, my best wishes for your health, happiness and long life and for the ever greater progress and prosperity of the American people.

With profound regards,

Yours sincerely,

General
(M. Zia-ul-Haq)

Dear Mr. Fodor:

Nancy and I thank you for your splendid performance at the official dinner in honor of Mohammad Khan Junejo, Prime Minister of the Islamic Republic of Pakistan, on July 16. It was, indeed, the highlight of the evening.

We appreciate your continued generosity in sharing your unique talents with us on **these special occasions**. Please convey our further thanks to Judith Olson for her own gifted contributions as your accompanist.

Again, with our gratitude and all best wishes,

Sincerely,

RONALD REAGAN

Dear Mr. Phillips:

Thank you for your letter of July 18 concerning the invitation extended to Mr. George Keller to the State Dinner honoring His Excellency Mohammad Khan Junejo Prime Minister of the Islamic Republic of Pakistan.

Mr. Keller has been very supportive of the President's economic policy initiatives, namely deficit reduction, Gramm-Rudman, and tax reform.

You are absolutely right when you said that the President has made his strong support be known for the courageous freedom fighters in Angola. He feels as committed to their fight for a free Angola today, as ever before.

Thank you for your concern and for taking the time to express it.

Sincerely,

Linda Faulkner

July 28, 1986

MEMORANDUM FOR MARI MASENG

FROM: LINDA FAULKNER

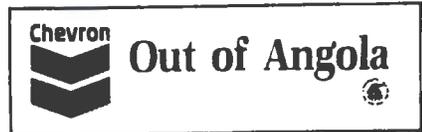

RE: The Letter from Mr. Howard Phillips of
the Conservative Caucus

The attached letter from Mr. Phillips expresses his disappointment that Mr. George Keller, Chairman of Chevron Corporation, was invited to a State Dinner because he states that Mr. Keller has been "responsible for continuing flow of hard currency resources to the Soviet puppet regime in Angola."

Could you let me know how I might best answer Mr. Phillips? Many thanks.

July 18, 1986

Mrs. Linda Faulkner
Social Office
The White House
Washington, D.C. 20500

Dear Mrs. Faulkner:

I was frankly shocked to see that the Chairman of the Chevron Corporation, which has been responsible for a continuing flow of hard currency resources to the Soviet puppet regime in Angola, was an honored guest at the President's dinner this past Wednesday evening in connection with the visit of the Prime Minister of Pakistan.

The President has made clear his strong support for the freedom fighters led by Dr. Jonas Savimbi and his personal displeasure with private companies which subordinate vital U.S. interests to the pursuit of commercial advantage.

Gray and Company, the public relations agency which briefly provided Washington representation for the Communist government of Angola, discontinued that representation in the midst of clear indications of White House disapproval.

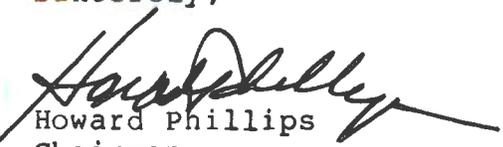

It became clear during the Gray incident that the Communist Angolans had powerful friends in Washington, including Vice President Bush's former chief of staff, Daniel Murphy, who was for some time on their payroll.

I hope the President has not been compromised as the result of behind-the-scenes pressure brought to bear on the Social Office in behalf of special pleaders for the Soviet puppet regime in Angola.

I would be interested in learning more about the circumstances of Mr. Keller's invitation to the White House.

With personal best wishes, I am

Sincerely,

Howard Phillips
