PRESIDENTIAL REMARKS: NATIONAL INSTITUTES OF HEALTH
PANEL DISCUSSION ON AIDS
THURSDAY, JULY 23, 1987

Thank you. As you know, generally, when I talk to a group like this, I open with a joke or two -- to put all of us at ease, get things rolling. I hope you'll forgive me if I skip that today. I've just come from the ward you have here for children who have AIDS. Let me just make a promise to those children and all others who have contracted this disease. We will -- I will -- do all that God gives us the power to do to find a cure for AIDS. We will not stop, we will not rest, until we have sent AIDS the way of smallpox and policies.

Those are words of resolve. Now I'd like to add a few words ercouragenent of hope. One of the amazing stories of modern medicine is the inunderstanding progress that we've already made against AIDS. I know this is old news to you in this room. So many of the breakthroughs were achieved right here in this building. But, for our friends in the press, I thought I should put the speed of progress in perspective. Just think that the day I was sworn in as President, we didn't even know that AIDS existed. It wasn't until 5 months later that the disease was discovered. But only 3 years after that, in a laboratory on this campus, Dr. Robert Gallo isolated the AIDS virus. This was, of course, at about the same time, as is often the case, similar work was being done by Dr. Luc Montaignier at the Pasteur Institute in Paris. Within a year, a blood test was available. And now a treatment drug,

A.Z.T., is also on the market, also developed here in this building, by Dr. Sam Broder, whom I met earlier this afternoon.

Dr. Broder told me, by the way, that more progress is coming. He mentioned work on a number of new and promising drugs for treating AIDS. And I understand that a vaccine will soon go into testing. As these drugs and vaccines come along, I am determined that red tape will not keep them away from those in need. We will make certain that they get the same kind of accelerated review from the Food and Drug Administration that got the A.Z.T. application approved in only 4 months -- record time.

I know that everyone here understands how dazzling the progress against AIDS has been. It took 40 years of study to learn as much about polio. It took 19 years to develop a vaccine against hepatitis B. To keep up the momentum, this year the Federal Government will spend \$317 million on AIDS research and development and \$845 million overall. Next year we'll spend 30 percent more on research and \$1.26 billion overall. Spending on AIDS has been one of the fastest-growing areas of the Federal budget. The limits on research progress today are not the limits of spending, but of the scientific process itself. Growing cultures, monitoring the spread of infection, conducting tests—all of this takes time.

Presidential Commission on the Human Immunodeficiency Virus

Epidemic. Dr. Eugene Mayberry, the Chief Executive Officer of

the Mayo Clinic, is chairman of the Commission, the members of

all of this takes time. Today we're taking another big step against AIDS. The morning at the White House we announced the members of the

remoded or HHS/OMS which are drawn from a wide range of backgrounds and points of view. And I say Dr. Mayberry "is" chairman, not "will be" chairman, because not only did we announce the Commission's membership today, but today is also the Commission's first day of work. They're wasting no time. And, in fact, talk about speed, Dr. Mayberry will present the Commission's first report to me in 90 days.

Dr. Mayberry and his colleagues will recommend a full-fledged strategy for battling AIDS. We already have a research strategy for finding a cure. The Commission will be reviewing not only that, but also looking at questions of treatment and prevention. How can we most compassionately care for those who have AIDS? How can we most justly and effectively protect the public from the spread of AIDS?

What we need right now in the battle against AIDS is a good, strong dose of common sense. It seems to me common sense to recognize that, when it comes to stopping the spread of AIDS, medicine and morality teach the same lessons.

It's also common sense that ignorance about the extent of
the spread of AIDS won't help anyone -- those who have it; those
who might get it; those who are looking for ways of preventing
its spread. This is why I called recently for certain kinds of
testing. I hope the Commission will help us all put aside our
suspicions and work together with common sense against this
common threat.

I wish I could say that the vast amounts of money and effort we're putting into AIDS research will give us a cure in a week,

Why S

That's why it is so important that we stop the spread of this disease. Men and women continue to become infected and in doing so their lives are at risk. For those who are already infected with the virus, it is important to continue our efforts to develop treatments to keep the virus from doing harm. And our ultimate goal is to develop a vaccine which will give full protection from this scourge. It is my hope that you will be successful in your research and that your success will come soon.

or a year, or by an absolutely certain date. The truth is, none for us knows for certain just when a cure will come? It might not be until the late 1990's. It might not be until later. That's why prevention and treatment are so important now.

But in the spirit of hope, let's not forget, a cure might possibly arrive much sooner. A few weeks ago I was reading about another field of astonishingly rapid scientific progress -- not in medicine, but in physics. Despite all the advances of the last year, in what has become known as the phenomenon of superconductivity, one problem was said to be years from solving, that of finding a material that could handle what I, as a layman, would call large volumes of electricity. One week later, another report appeared announcing that the problem had been solved.

Years of progress in one week.

I don't know if the day will come when such progress will be in the cards for AIDS research. But that is my hope. And after the visit to the ward today and after the death by AIDS of friends and former associates -- Rock Hudson for one -- that is my prayer.

And now let me turn the meeting over to Secretary Bowen.

Thank Dr. Bowen, Dr. Wyngaarden, and Dr. Fauci. By the way, I thought you would all like to know that, near as I can determine, Dr. Bowen is only the seventh physician to serve in the Cabinet from George Washington's time to the present.

As I was listening to the panel and going on the tour today, I couldn't help remembering something W. H. Auden said -- that

OSTP

statesmen but scientists. The Commission will be working with you and many others to chart the Nation's course against this disease. I believe that, when the medical history of our times is written, you and they will go down as among our greatest men and women of action.

Thank you and God bless you.

THE WHITE HOUSE

WASHINGTON

July 17, 1987

MEMORANDUM FOR ANTHONY R. DOLAN

JUL 17 1 10 13

DEPUTY ASSISTANT TO THE PRESIDENT AND

DIRECTOR OF SPEECHWRITING

FROM:

ARTHUR B. CULVAHOUSE, JR. COUNSEL TO THE PRESIDENT

Original Signed by ABC

SUBJECT:

Presidential Remarks: National Institute

of Health Panel Discussion on AIDS

Counsel's office has reviewed the above-referenced remarks and, subject to the following comment, has no objection to them from a legal perspective.

The President refers to his recent call for certain kinds of testing in making an appeal to end ignorance about the disease. The sentence containing this reference is a brief and general one, but I question whether any reference to testing does more good than harm. As witnessed by the President's May 31 speech at the AIDS research awards dinner, comments by the President on testing evoke considerable controversy and dominate media coverage, thereby obscuring the many positive and widely-supported features of the President's program.

PRESIDENTIAL REMARKS: NATIONAL INSTITUTES OF HEALTH PANEL DISCUSSION ON AIDS WEDNESDAY, JULY 22, 1987

Thank you. As you know, generally, when I talk to a group like this, I open with a joke or two -- to put all of us at ease, get things rolling. I hope you'll forgive me if I skip that today. I've just come from the ward you have here for children who are a AIDS. Let me just make a promise to those children and all others who have contracted this disease. We will -- I will -- do all that God gives us the power to do to find a cure for AIDS. We will not stop, we will not rest, until we have sent AIDS the way of smallpox. And police.

PeHHS

Dr. Broder told me, by the way, that more progress is coming. He mentioned work on a number of new and promising drugs for treating AIDS. And I understand that a vaccine will soon go into testing. As these drugs and vaccines come along, I am determined that red tape will not keep them away from those in need. We will make certain that they get the same kind of accelerated review from the Food and Drug Administration that got the A.Z.T. application approved in only 4 months -- record time.

I know that everyone here understands how dazzling the

progress against AIDS has been. It took 40 years of study to learn as much about polio. It took 19 years to develop a vaccine against hepatitis B. To keep up the momentum, this year the Federal Government will spend \$317 million on AIDS research and \$766 million overall. Next year we'll spend 30 percent more on research and \$1 billion overall. The only limits on research spending today are the physical limits of research facilities and people trained in the necessary techniques.

Today we're taking another big step against AIDS. This morning at the White House we announced the members of the Presidential Commission on the Human Immunodeficiency Virus Epidemic. Dr. Eugene Mayberry, the Chief Executive Officer of the Mayo Clinic, is chairman of the Commission, the members of which are drawn from a wide range of backgrounds and points of view. And I say Dr. Mayberry "is" chairman, not "will be" chairman, because not only did we announce the Commission's membership today, but today is also the Commission's first day of work. They're wasting no time. And, in fact, talk about speed,

Dr. Mayberry will present the Commission's first report to me in 90 days.

Dr. Mayberry and his colleagues will recommend a full-fledged strategy for battling AIDS. We already have a research strategy finding a cure. The Commission will be reviewing not only that, but also looking at questions of treatment and prevention. How can we most compassionately care the victors of AIDS? How can we most justly and effectively protect the public from the spread of AIDS?

What we need right now in the battle against AIDS is a good, strong dose of common sense. It seems to me common sense to recognize that, when it comes to stopping the spread of AIDS, medicine and morality teach the same lessons.

It's also common sense that ignorance about the extent of the spread of AIDS won't help anyone — those who have it; those who might get it; those who are looking for ways of preventing its spread. This is why I called recently for certain kinds of testing. I hope the Commission will help us all put aside our experience and work together with common sense against this common threat.

I wish I could say that the vast amounts of money and effort we're putting into AIDS research will give us a cure in a week, or a year, or by an absolutely certain date. The truth is, none of us knows for certain just when a cure will come. It might not be until the late 1990's. It might not be until later. That's why prevention and treatment are so important now.

But in the spirit of hope, let's not forget, a cure might possibly arrive much sooner. A few weeks ago I was reading about another field of astonishingly rapid scientific progress -- not in medicine, but in physics. Despite all the advances of the last year, in what has become known as the phenomenon of superconductivity, one problem was said to be years from solving, that of finding a material that could handle what I, as a layman,

would call large volumes of electricity. One week later, another,

report appeared announcing that the problem had been solved. meakthrow hope In the problem had been solved. meakthrow if the day will come decomposed when such progress will be in the cards for AIDS research.

But that is my hope. And after the visit to the ward today he applied and after the death by AIDS of friends and former associates -- on a Rock Hudson for one -- that is my prayer.

And now let me turn the meeting over to Secretary Bowen. [CLOSING]

Thank Dr. Bowen, Dr. Wyrgaarden, and Dr. Fauci. By the way, I thought you would all like to know that, near as I can determine, Dr. Bowen is only the seventh physician to serve in the Cabinet from George Washington's time to the present.

As I was listening to the panel and going on the tour today, I couldn't help remembering something W.H. Auden said -- that the true men of action in our times are not politicians or statesmen but scientists. The Commission will be working with you and many others to chart the Nation's course against this disease. I believe that, when the medical history of our times is written,

Bledsoe

you and they will go down as among our greatest men and women of action.

Thank you and God bless you.

PRESIDENTIAL REMARKS: NATIONAL INSTITUTES OF HEALTH PANEL DISCUSSION ON AIDS WEDNESDAY, JULY 22, 1987

Thank you. As you know, generally, when I talk to a group like this, I open with a joke or two -- to put all of us at ease, get things rolling. I hope you'll forgive me if I skip that today. I've just come from the ward you have here for children who are dying of AIDS. Let me just make a promise to those children and all others who have contracted this disease. We will -- I will -- do all that God gives us the power to do to find a cure for AIDS. We will not stop, we will not rest, until we have sent AIDS the way of smallpox and polio.

Those are words of resolve. Now I'd like to add a few words of hope. One of the amazing stories of modern medicine is the progress that we've already made against AIDS. I know this is old news to you in this room. So many of the breakthroughs were achieved right here in this building. But, for our friends in the press, I thought I should put the speed of progress in perspective. Just think that the day I was sworn in as President, we didn't even know that AIDS existed. It wasn't until 5 months later that the disease was discovered. But only 3 years after that, in a laboratory three floors below us, Dr. Robert Gallo isolated the AIDS virus. Within a year, a blood test was available. And now a treatment drug, A.Z.T., is also on the market, also developed here in this building, by Dr. Sam Broder, whom I met earlier this afternoon.

Dr. Broder told me, by the way, that more progress is coming. He mentioned work on a number of new and promising drugs for treating AIDS. And I understand that a vaccine will soon go into testing. As these drugs and vaccines come along, I am determined that red tape will not keep them away from those in need. We will make certain that they get the same kind of accelerated review from the Food and Drug Administration that got the A.Z.T. application approved in only 4 months -- record time.

I know that everyone here understands how dazzling the progress against AIDS has been. It took 40 years of study to learn as much about polio. It took 19 years to develop a vaccine against hepatitis B. To keep up the momentum, this year the federal Government will spend \$307 million on AIDS research and \$45 million overall. Next year we'll spend 30 percent more on research and \$1 billion overall. The only limits on research spending today are the physical limits of research facilities and people trained in the necessary techniques.

Today we're taking another big step against AIDS. This morning at the White House we announced the members of the Presidential Commission on the Human Immunodeficiency Virus Epidemic. Dr. Eugene Mayberry, the Chief Executive Officer of the Mayo Clinic, is chairman of the Commission, the members of which are drawn from a wide range of backgrounds and points of view. And I say Dr. Mayberry "is" chairman, not "will be" chairman, because not only did we announce the Commission's membership today, but today is also the Commission's first day of work. They're wasting no time. And, in fact, talk about speed,

WASHINGTON

July 22, 1987

VISIT TO THE NATIONAL INSTITUTES OF HEALTH

Date: July 23, 1987

Location: National Institutes of Health

Bethesda, Maryland

Time: 12:50 p.m.

(1 hour and 55 minutes, portal to portal)

From: Nancy J. Risque

I. Purpose

To focus attention on your Commission on the Human Immunodeficiency Virus Epidemic and on the Federal Government's continuing commitment to progress against AIDS and AIDS-related diseases.

II. Background

You will meet the members of the Commission, visit a laboratory involved in research and development of AIDS-treatment drugs, visit with children in an experimental treatment program, and be briefed with the Commission members on the current progress in the battle against AIDS and AIDS-related diseases.

Commission: On June 24, 1987, you signed an executive order creating the Presidential Commission on the Human Immunodeficiency Virus Epidemic. The Commission is charged with recommending measures that government at all levels should take to protect the public from infection, assist in finding a cure for AIDS, and care for those who already have AIDS.

Broder Laboratory: Dr. Samuel Broder, Associate Director for Clinical Oncology at the National Cancer Institute, heads the laboratory where the first work was done on the use of AZT as a treatment for AIDS. At this time there is no drug that can eradicate the virus in someone who is already infected. However, Dr. Broder's group evaluates drugs that may combat the disease and has had some success with drugs that limit the growth of the number of viruses in people who are already infected. AZT, or Retrovir, which is its trade name, is one of these drugs and is currently being prescribed for nearly half of the victims of AIDS.

Pediatric Ward: The research that led to Retrovir being prescribed for many AIDS patients proved the drug is effective for some adults. Now Dr. Philip Pizzo is working to determine whether Retrovir can combat HIV infection in children and is currently treating 14 children with the drug in an experimental treatment program. They come to NIH biweekly at first, and then monthly once the drug's effect has plateaued. While adults take Retrovir in pill form, the children receive it in liquid form, administered continuously through a semi-permanent catheter. Dr. Pizzo will introduce you to some of these children and their parents.

Briefing: Dr. Anthony S. Fauci, Director of the National Institute of Allergy and Infectious Diseases, will brief you and the members of your Commission on the current state of the science in the fight against AIDS and the current challenges facing doctors and researchers. Dr. Fauci has previously briefed you and the Domestic Policy Council on AIDS.

III. Participants

Secretary Bowen; Dr. James B. Wyngaarden, Director, National Institutes of Health; Dr. Eugene Mayberry, Chairman of the Commission; Dr. Samuel Broder; Dr. Philip Pizzo; Members of the Commission; and approximately 110 invited guests from the National Institutes of Health and the Department of Health and Human Services.

IV. Press Plan

Full Press

V. Sequence of Events

To be provided by Presidential Advance.

Attachments: Remarks by Speechwriters
List of Commission Members

LIST OF COMMISSION MEMBERS

William Eugene Mayberry, M.D., CHAIRMAN (Minnesota)

- -- Chief Executive of the Mayo Clinic
- -- You designated him chairman on June 15, 1987, and met with him at that time

Colleen Conway-Welch, Ph.D. (Tennessee)

- -- Dean of the College of Nursing at Vanderbilt University
- -- Representative of the Nursing Community

John J. Creedon (New York)

- -- Chief Executive Officer, Metropolitan Life Insurance Company
- -- Chairman, Business Roundtable's Task Force on Health and Welfare Benefit Plans
- -- LL.B. and LL.M., New York University
- -- Representative of the Insurance and Business Community and the Legal Community

Theresa L. Crenshaw, M.D. (California)

- -- Director of the Crenshaw Clinic that specializes in the evaluation and treatment of sexual dysfunction, sexual medicine and human relations
- -- Representative of the Medical Community

Richard M. DeVos (Michigan)

- -- Co-founder and President of Amway Corporation
- -- Representative of the Business Community

Burton James Lee III, M.D. (New York)

- -- Physician, Memorial Sloan-Kettering Cancer Center
- -- Specializes in the diagnosis and treatment of lymphomas, the most common cancers affecting people with AIDS
- -- Recommended by the Vice President
- -- Representative of the Community of Practicing Physicians

Frank Lilly, Ph.D. (New York)

- -- Chairman of the Genetics Department, Albert Einstein Medical Center, New York City
- -- Representative of the Science Community

Woodrow A. Meyers, Jr., M.D. (Indiana)

- -- Commissioner of Public Health, State of Indiana
- -- Representative of the Public Health Community

John Cardinal O'Connor (New York)

- -- Archbishop of New York
- -- Representative of the Religious Community

Penny Pullen (Illinois)

- -- Assistant House Minority Leader, State of Illinois
- -- Author of a package of AIDS bills (reflecting your thinking on what the states should be doing regarding AIDS)
- -- Strongly supported by the Conservative community
- -- Representative of the Community of State and Local Governments

Cory SerVaas, M.D. (Indiana)

- -- Editor and Publisher of The Saturday Evening Post
- -- Representative of the Publishing and Medical Communities

William B. Walsh, M.D. (Maryland)

- -- Founder and President, Project HOPE
- -- You recently presented him with the Medal of Freedom
- -- Representative of the International Community

Admiral James D. Watkins (Ret.) (District of Columbia)

- -- Former Chief of Naval Operations
- -- Representative of the Military Community

MEMORANDUM FOR HOWARD H. BAKER, JR.

THROUGH:

WILLIAM HENKER FOR

JAMES L. HOOLEYN

FROM:

SUBJECT:

VISIT TO THE NATIONAL INSTITUTES OF HEALTH

THURSDAY, JULY 23, 1987

Event Concept

On the day of the announcement of the Commission on AIDS, The President will visit the National Institutes of Health to witness NIH's recent successes in the field of AIDS research and to take part in a forum designed to present the newly appointed Commission to the health community.

At the Clinical Center, the President will proceed to a working laboratory to observe "cutting edge" research and be briefed by Dr. Broder, a world renowned scientist who discovered the AZT antibiotic in that very laboratory. The President will then cross the hall to a Pediatric Ward to visit young AIDS victims and their parents.

Finally, the President will participate in a panel briefing on the state of AIDS research, accompanied by the Commission and attended by approximately 100 to 150 members of the health community.

The President will conclude the briefing with "a charge" to the Commission and other members of the Health community, to work together on a series of recommendations to be reported at a later date.

This memorandum is being forwarded to Rhett Dawson for submission to the President unless otherwise instructed.

PROPOSED SUMMARY SCHEDULE FOR THE PRESIDENT

THURSDAY, JULY 23, 1987

1:05 p.m. MARINE ONE departs the South Lawn en route Bethesda landing zone.

Flight Time: 15 mins.

Nighthawk II and III depart Pentagon landing zone en route Bethesda landing zone.

Nighthawk II and III arrive Bethesda Naval Hospital landing zone.

1:20 p.m. MARINE ONE arrives Bethesda Naval Hospital landing zone.

THE PRESIDENT deplanes and proceeds to motorcade for boarding.

PRESS POOL COVERAGE

1:25 p.m. THE PRESIDENT departs Bethesda Naval Hospital landing zone en route the National Institutes of Health.

Drive Time: 5 mins.

1:30 p.m. THE PRESIDENT arrives rear entrance of the Warren Grant Magnussen, Clinical Center, Building 10 and proceeds inside to elevators.

THE PRESIDENT arrives 13th floor and proceeds to Broder Laboratory.

Met by:

Dr. Broder

OFFICIAL PHOTOGRAPHER ONLY

1:35 p.m. THE PRESIDENT receives briefing on status of AIDS research and treatment from Dr. Broder.

PRESS POOL COVERAGE

1:40 p.m. THE PRESIDENT proceeds to Pediatric Ward to meet with patients.

OFFICIAL PHOTOGRAPHER ONLY

1:50 p.m. THE PRESIDENT concludes patient greeting and proceeds to holding room, via stairs.

THE PRESIDENT arrives holding room.

THE PRESIDENT departs holding room en route off-stage announcement area at 14th floor Auditorium.

1:55 p.m. THE PRESIDENT arrives 14th floor Auditorium off-stage announcement area.

Announcement (off-stage)

THE PRESIDENT proceeds on-stage and takes seat.

OPEN PRESS COVERAGE

2:00 p.m. Program begins.

NOTE: Format of Program TBD

OPEN PRESS COVERAGE

2:25 p.m. Program concludes.

THE PRESIDENT proceeds to holding room.

THE PRESIDENT arrives holding room.

THE PRESIDENT proceeds to motorcade for boarding, via elevator.

2:30 p.m. THE PRESIDENT departs NIH, Building 10, en route Bethesda Naval Hospital landing zone.

Drive Time: 5 mins.

2:35 p.m. THE PRESIDENT arrives Bethesda Naval Hospital landing zone.

THE PRESIDENT proceeds to Marine One for boarding.

2:40 p.m. MARINE ONE departs Bethesda Naval Hospital landing zone en route The White House.

Flight Time: 15 mins.

Nighthawk II and III depart Bethesda Naval Hospital landing zone en route Pentagon landing zone.

2:55 p.m. MARINE ONE arrives the South Lawn.

THE PRESIDENT deplanes and proceeds to Oval Office.

Nighthawk II and III depart Bethesda Naval Hospital landing zone en route Pentagon landing zone.
